

What is Div tag ?

The <div> tag defines a division or a section in an HTML document.

The div tag is known as the Division tag.

The HTML <div> tag is a block-level element used for grouping and structuring content.

The <div> tag is used as a container for HTML elements - which is then styled with CSS or manipulated with JavaScript.

The <div> tag is easily styled by using the class or id attribute.

Any sort of content can be put inside the <div> tag!

By default, browsers always place a line break before and after the <div> element.

Example:

```
<!DOCTYPE html>
```

```
<html lang="en">
```

```
  <head>
```

```
    <meta charset="UTF-8" />
```

```
    <meta name="viewport" content="width=device-  
width, initial-scale=1.0" />
```

```
    <title>CSS</title>
```

```
  <style>
```

```
    .div1 {
```

```
border: 2px solid red;

color: red;

background-color: black;

font-size: 20px;

font-family: "Franklin Gothic Medium", "Arial
Narrow", Arial, sans-serif;
}

.div2 {

border: 2px solid blue;

color: yellow;

background-color: rgb(97, 97, 98);

font-size: 30px;

font-family: Cambria, Cochin, Georgia, Times,
"Times New Roman", serif;
}

</style>

</head>

<body>

<div class="div1">

<h1>HTML</h1>

<p>
```

Lorem ipsum dolor sit amet consectetur
adipisicing elit. Dolores

inventore asperiores omnis ipsa aut quaerat
preferendis voluptatum sunt

eveniet minima. Harum debitis, sequi fugiat ab
magnam repellendus

dolorum ad voluptate in alias. Totam numquam
incididunt ducimus vel dolore

accusantium quos quis nobis aperiam.
Preferendis dolor nemo asperiores

iusto sed quod.

</p>

</div>

<div class="div2">

<h2>css</h2>

<p>

Lorem ipsum dolor, sit amet consectetur
adipisicing elit. Exercitationem

qui alias hic quaerat vitae. Suscipit tempora
laborum assumenda aliquam

maxime vitae nobis adipisci inventore, hic
cumque neque fugit, ratione

</p>

</div>

</body>

</html>

Div Example 2:

```
<!DOCTYPE html>
<html lang="en">
  <head>
    <meta charset="UTF-8" />
    <meta name="viewport" content="width=device-width, initial-scale=1.0" />
    <title>CSS</title>
    <style>
      .div1 {
        color: red;
        background-color: blue;
        text-align: center;
        text-decoration: underline;
      }

      .div2 {
        color: rgb(231, 201, 201);
        background-color: rgb(20, 20, 21);
        text-align: center;
        text-decoration: underline;
      }
    </style>
  </head>
  <body>
    <div class="div1">Kumar Nishant</div>
    <div class="div2">JavaByKumar</div>
  </body>
```

</html>

HTML Tag

The tag is an inline container used to mark up a part of a text, or a part of a document.

The tag is easily styled by CSS or manipulated with JavaScript using the class or id attribute.

The tag is much like the <div> element, but <div> is a block-level element and is an inline element.

For Example:

```
<div>we are <span style="color: red">learning</span>
css</div>
```

```
<!DOCTYPE html>
```

```
<html lang="en">
```

```
<head>
```

```
<meta charset="UTF-8" />
```

```
<meta name="viewport" content="width=device-width,
initial-scale=1.0" />
```

```
<title>CSS</title>
```

```
<style>
```

```
.myspan1 {
```

```
color: red;
```

background-color: blue;

text-decoration: underline;

}

.myspan2 {

color: rgb(231, 201, 201);

background-color: rgb(20, 20, 21);

text-decoration: underline;

}

</style>

</head>

<body>

** Kumar Nishant

**

JavaBykumar

</body>

</html>

Differences between <div> and Tags

<div>	
The <div> tag is a block level element.	The tag is an inline element.
It is best to attach it to a section of a web page.	It is best to attach a CSS to a small section of a line in a web page.
It accepts align attribute.	It does not accept align attribute.
This tag should be used to wrap a section, for highlighting that section.	This tag should be used to wrap any specific word that you want to highlight in your webpage.

HTML Block and Inline Elements

Block-level Elements

A block-level element always starts on a new line, and the browsers automatically add some space (a margin) before and after the element.

A block-level element always takes up the full width available (stretches out to the left and right as far as it can).

Two commonly used block elements are: <p> and <div>.

The <p> element defines a paragraph in an HTML document.

The <div> element defines a division or a section in an HTML document.

Inline Elements

An inline element does not start on a new line.

An inline element only takes up as much width as necessary.

This is a element inside a paragraph.

Here are the inline elements in HTML:

<a>	<abbr>	<acronym>		<bdo>	<big>	
<button>	<cite>	<code>	<dfn>		<i>	
<input>	<kbd>	<label>	<map>	<object>	<output>	<q>
<samp>	<script>	<select>	<small>			<sub>
<sup>	<textarea>	<time>	<tt>	<var>
