

CSS flex Property

The **CSS flex property** allows setting the length of flexible items. This shorthand property combines the flex-grow, flex-shrink, and flex-basis properties, making it more responsive and mobile-friendly.

It simplifies the positioning of child elements within the main container, ensuring margins do not collapse with content margins.

Additionally, it allows changing the order of elements without modifying the HTML structure.

1st

```
<style>
  .container {
    height: 540px;
